

Protective and Cosmetic Surface Coatings

# SURFACE PROTECTION FOR BUILDINGS

Unicoatings™ UC2K is a unique coating that protects buildings and assets to an unprecedented level from the elements and malicious damage, thus extending their life and reducing maintenance costs.

Based in the Netherlands, Unicoatings is a global organisation that specialises in the research, development and manufacture of sustainable coating products and treatments that are used daily, worldwide in endless applications across multiple market sectors.

UC2K can be applied to almost all surfaces, including concrete, stone, brickwork, glass, steel, aluminium, stainless steel and copper, as well as many lacquer systems.

Typical applications in the buildings sector include museums, heritage sites, offices, commercial premises and industrial units. Landlords, facilities managers and architects recognise that UC2K protects their assets by delivering an easy to clean protective shield that repels unwanted contaminants and prevents damage to the protected surface for many years.

## UC2K BENEFITS

### PROTECTION

Long lasting durable clear coating with high protection against salt spray, corrosion, solvents, chemicals, acids, alkalines, UV sunlight and high temperatures (to 350C).

### COLOUR PROTECTION

Colours can be protected on new buildings from the start and faded colours can be restored and preserved from deterioration or fading for many years to come.

### EASY TO CLEAN

High self-cleaning ability and 100% eco-friendly saves on labour, time and cleaning products.

### ANTI-GRAFFITI

Permanent protection against graffiti, which is easily and quickly removed without using aggressive cleaning methods.

### SUSTAINABLE

No strong chemicals or solvents required protects the environment as well as your assets.

### ANTI-FINGERPRINT

The transparent and colourless coating forms an anti-fingerprint layer, which protects your surfaces from corrosion, scratches and dirt.

## UNIQUE FORMULA

**UC2K is a two-component advanced technology clear coating that provides exceptional gloss retention and weather resistance for many years.**

The sealed surface is easily cleaned, without requiring special cleaners, and is more resistant to new soiling. After treatment, dull and tired paintwork, chalky glass-fibre (GGFK) surfaces and cloudy anodised aluminium gleam like new. Galvanised surfaces, such as aluminium, brass, copper and chrome, are protected long-term against corrosion. In addition, surfaces already coated with other products can be refreshed, sealed and protected on a long-term basis.

- Excellent gloss and long-life properties
- Easily applied to all surfaces by normal painting processes
- No special preparation of the base material is required
- Economical due to high coverage rates
- High productivity due to extremely thin coating layer

## EASY APPLICATION

Available in 1-, 5- and 25-litre containers, UC2K is easily applied via rolling, brush-painting, spraying or immersion. To achieve the best results, we recommend application by HVLP spray.

Due to UC2K's extremely thin minimum coating thickness (5-20µm), a coating capacity of approximately 30-40m<sup>2</sup> can be achieved per 1kg when applied to non-absorbent surfaces. For application on concrete or plastered surfaces, a lower gloss version will cover approximately 20-30m<sup>2</sup> per 1kg.

## TESTS & CERTIFICATIONS

**The following tests and certifications are available on the UC2K protective coating.**

### SAFE DRINKING WATER

Testing of products for use in contact with drinking water

### ENDURES-RPT16081

Barrier properties of a new type of protective coating

### ISO 9227, 11507 & 2813

COT - neutral salt spray testing (ISO 9227)

COT - QUV (ISO 11507) and specular gloss (ISO 2813)

*“UC2K has significantly reduced our cleaning and maintenance costs, while simultaneously protecting our buildings from graffiti and fouling by bird droppings... We are very pleased with its results.”*
